Pain Mary K. Kazanowski 2002 The experience of pain is the most common reason why individuals contact health care providers. Nursing Concepts: Pain is a text which describes how pain commonly manifests itself with regard to underlying clinical disorders, and with regard to age. A unique feature is the case studies presented in the text. This case study approach provides the reader with thorough descriptions of clients experiencing pain along with interventions that lead to the resolution of pain. In addition to describing the theory of pain, this text provides pertinent information on how to assess for pain in different patient populations. It describes pain in clients with Human

Immunodeficiency Virus (HIV), clients with malignant disease, clients with benign disorders such as chronic back pain, and in clients near death. It also describes barriers to the treatment of pain, with discussion of how the treatment of pain is often related to the setting. Recent JCAHO standards on pain mandate that health care providers perform a comprehensive assessment on all clients with pain and develop a plan for appropriate treatment. Nursing Concepts: Pain provides nurses and nursing students with the necessary information to update their knowledge and facilitate pain relief, making Nursing Concepts: Pain a necessary addition to the bookshelf of every present and future health care practitioner.

Clinical Forensic Medicine Margaret M. Stark 2007-11-13 The Metropolitan Police Service (MPS), now in its 175th year, has a long tradition of working with doctors. In fact, the origin of the forensic physician (police surgeon) as we know him or her today, dates from the passing by Parliament of The Metropolitan Act, which received Royal Assent in June of 1829. Since then, there are records of doctors being "appointed" to the police to provide medical care to detainees and examine police officers while on duty. The MPS has been involved in the training of doctors for more

than 20 years, and has been at the forefront of setting the highest standards of working practices in the area of clinical forensic medicine. Only through an awareness of the complex issues regarding the medical care of detainees in custody and the management of complainants of assault can justice be achieved. The MPS, therefore, has worked in partnership with the medical profession to ensure that this can be achieved. The field of clinical forensic medicine has developed in recent years into a specialty in its own right. The importance of properly trained doctors working with the police in this area cannot be overemphasized. It is essential for the protection of detainees in police custody and for the benefit of the criminal justice system as a whole. A book that assists doctors in the field is to be applauded.
