**Immunization** Stuart Blume 2017-08-15 One of the most important tools in the public health arsenal, vaccines are to thank for the global eradication of smallpox, and for allowing us to defeat the dire threat of infectious disease for more than one hundred years. Vaccine development is where scientists turn when faced with the frightening spread of new diseases like Zika, SARS,

and Ebola. So if vaccines have proven to be such an effective tool, why are growing numbers of people questioning the wisdom of vaccinating children? Why have public-sector vaccine producers almost vanished? And can we trust the multinational corporations that increasingly dominate vaccine development and production? In this highly original and controversial new book, Stuart Blume argues that processes of globalization and unmet healthcare needs are eroding faith in the institutions producing and providing vaccines. He brings together short, readable histories of immunization practices over the past century, from the work of early pioneers such as Louis Pasteur and Robert Koch to the establishment of the World Health Organization and the introduction of genetic engineered vaccines. Focusing on today's "vaccine hesitancy," the book exposes the inadequacies of public health persuasion, and discusses what will be needed to restore parents' confidence. This is a timely history, one that not only sheds new light on the origins of our global vaccine crisis, but also points a way forward.

**Researching the Visual** Michael Emmison 2000-03-15 `The book has a solid practical feel to it, and although it deals philosophically with leading theorists such as Foucault, Goffman, Bourdieu and Hall it grounds the practice of visual research into everyday use... Weaved cleverly throughout are numerous practical exercises which draw together the theoretical concepts and give them a grounded rational element. This book is a valuable research tool and I would anticipate that many researchers will find it a worthwhile addition to their armoury' - Mental Health Care Providing a comprehensive introduction to the entire field of visual research, this book reviews the contributions of traditions as diverse as semiotics, ethnomethodology, symbolic interactionism and

**Making Sense of Field Research** Sheila Pontis 2018-07-17 Learn how to use field research to bring essential people-centred

insights to your information design projects. Information design is recognized as the practice of making complex data and information understandable for a particular audience, but what's often overlooked is the importance of understanding the audience themselves during the information design process. Rather than rely on intuition or assumptions, information designers need evidence gathered from real people about how they think, feel, and behave in order to inform the design of effective solutions. To do this, they need field research. If you're unsure about field research and how it might fit into a project, this book is for you. This text presents practical, easy-to-follow instructions for planning, designing, and conducting a field study, as well as guidance for making sense of field data and translating findings into action. The selection of established methods and techniques, drawn from social sciences, anthropology, and participatory design, is geared specifically toward information design problems. Over 80 illustrations and five real-world case studies bring key principles and methods of field research to life. Whether you are designing a family of icons or a large-scale signage system, an instruction manual or an interactive data visualization, this book will guide you through the necessary steps to ensure you are meeting people's needs.

**Conscious Coaching** Brett Bartholomew 2017-03-08 In the world of strength and conditioning, learning how to move others-not just physically, but also psychologically and emotionally-is paramount to getting the most out of them. People are the ultimate performance variable, and understanding how to effectively blend knowledge of proper training with the nuances of human behavior is integral to helping athletes achieve their ultimate goals. Unfortunately, while much attention has been given to the science of physical training, little attention has been given to the science of communication. *Conscious Coaching: The Art and Science of Building Buy-In* bridges this gap. Readers learn the foundational principles of improving relationships, enhancing engagement, and gaining the trust of athletes through targeted communication. And, every bit as important, readers also learn concrete strategies to apply these principles in day-to-day coaching situations they will inevitably encounter. The result is a game-changing book that sets the stage for coaches to create a culture of success not only within sport, but also beyond. *Conscious Coaching* is a movement and its time has come.

**The New Frontiers of Fashion Law** Rossella Esther Cerchia 2021-01-13 Fashion law encompasses a wide variety of issues that concern an article of clothing or a fashion accessory, starting from the moment they are designed and following them through distribution and marketing phases, all the way until they reach the end-user. Contract law, intellectual property, company law, tax law, international trade, and customs law are of fundamental importance in defining this new field of law that is gradually taking shape. This volume focuses on the new frontiers of fashion law, taking into account the various fields that have recently emerged as being of great interest for the entire fashion world: from sustainable fashion to wearable technologies, from new remedies to cultural appropriation to the regulation of model weight, from advertising law on the digital market to the impact of new technologies on product distribution. The purpose is to stimulate discussion on contemporary problems that have the potential to define new boundaries of fashion law, such as the impact of the heightened ethical sensitivity of consumers (who increasingly require effective solutions), that a comparative law perspective renders more interesting. The volume seeks to sketch out the new legal fields in which the fashion industry is getting involved, identifying the new boundaries of fashion law that existing literature has not dealt with in a comprehensive manner.

*Engineering for Human-Computer Interaction* Stéphane Chatty 1999-08-31 The aim of IFIP Working Group 2.7 (13.4) for User Interface Engineering is to investigate the nature, concepts and construction of user interfaces for software systems. The group's scope is: • developing user interfaces based on knowledge of system and user behaviour; • developing frameworks for reasoning about interactive systems; and • developing engineering models for user interfaces. Every three years, the group holds a "working conference" on these issues. The conference mixes elements of a regular conference and a workshop. As in a regular conference, the papers describe relatively mature work and are thoroughly reviewed. As in a workshop, the audience is kept small, to enable in-depth discussions. The conference is held over 5-days (instead of the

usual 3-days) to allow such discussions. Each paper is discussed after it is presented. A transcript of the discussion is found at the end of each paper in these proceedings, giving important insights about the paper. Each session was assigned a "notes taker", whose responsibility was to collect/transcribe the questions and answers during the session. After the conference, the original transcripts were distributed (via the Web) to the attendees and

modifications that clarified the discussions were accepted. *Significance* P. Beynon-Davies 2010-11-30 Signs are critically important in all forms of activity, including business, because they establish what it is to be human. Without signs we could not think, we could not communicate what we think and we could not ensure that we collaborate together in our work, home and leisure. The aim of this book is to explain how and why they are significant.
