Curriculum and Teaching Dialogue
David J. Flinders 2013-09-01
Curriculum and Teaching Dialogue
(CTD) is a publication of the
American Association of Teaching and
Curriculum (AATC), a national learned
society for the scholarly field of
teaching and curriculum. The field
includes those working on the theory,

design and evaluation of educational programs at large. At the university level, faculty members identified with this field are typically affiliated with the departments of curriculum and instruction, teacher education, educational foundations, elementary education, secondary education, and higher education. CTD promotes all analytical and interpretive approaches that are appropriate for the scholarly study of teaching and curriculum. In fulfillment of this mission, CTD addresses a range of issues across the broad fields of educational research and policy for all grade levels and types of educational programs.

Periods in Quantum Field Theory and Arithmetic José Ignacio Burgos Gil
2020-03-14 This book is the outcome of research initiatives formed during the special ``Research Trimester on Multiple Zeta Values, Multiple Polylogarithms, and Quantum Field Theory'' at the ICMAT (Instituto de Ciencias Matemáticas, Madrid) in 2014. The activity was aimed at understanding and deepening recent developments where Feynman and string amplitudes on the one hand, and periods and multiple zeta values on the other, have been at the heart of lively and fruitful interactions between theoretical physics and number theory over the past few decades. In this book, the reader

will find research papers as well as survey articles, including open problems, on the interface between number theory, quantum field theory and string theory, written by leading experts in the respective fields. Topics include, among others, elliptic periods viewed from both a mathematical and a physical standpoint; further relations between periods and high energy physics, including cluster algebras and renormalisation theory; multiple Eisenstein series and q -analogues of multiple zeta values (also in connection with renormalisation); double shuffle and duality relations; alternative presentations of multiple zeta values using Ecalle's theory of moulds and arborification; a distribution formula for generalised complex and l -adic polylogarithms;

Galois action on knots. Given its scope, the book offers a valuable resource for researchers and graduate students interested in topics related to both quantum field theory, in particular, scattering amplitudes, and number theory.

Equity Warriors George S. Perry, Jr. 2022-02-08 Advance equity by learning to crack the system's codes We must act now, using what we already know, to advance equity and raise the achievement of every student. With three decades of leading equity work across the country, George S. Perry Jr. issues a call to action for

educational leaders who are willing to fight the fight for equity for all students. School and district leaders will encounter roadblocks as they enact systemic change, but Equity Warriors introduces practical, realistic, and strategic approaches for navigating those barriers. Equity Warriors equips education leaders with the moves they can make today to achieve the vision that every student becomes a high achiever by Providing real school and district examples of systemic equity efforts Demonstrating the parallel work that school and district teams must do to achieve and sustain systemic change Cracking the codes in the domains of politics, diplomacy, and warfare to achieve the equity agenda. Equity Warriors is a must read for leaders at all levels of the system who have chosen to be

in this fight and are ready to do what it takes to make the system work for all students.
