Economic Modelling at the Bank of England

G. B. Henry 2013-03-12 J. S. FLEMMING

The Bank of England's role as a leading central bank involves both formal and

informal aspects. At a formal level it is an adviser to HM Government, whilst at an informal level it is consulted by domestic and overseas institutions for advice on many areas of economic interest. Such advice must be grounded in an understanding of the workings of the domestic and international economy—a task which becomes ever more difficult with the pace of change both in the economy and in the techniques which are used by professional economists to analyse such changes. The Bank's economists are encouraged to publish their research whenever circumstances permit, whether in refereed journals or in other ways. In particular, we make it a rule that the research underlying the Bank's macroeconomic model, to which outside researchers have access through the ESRC (Economic and Social Research Council) macromodelling bureau, should be

adequately explained and documented in published form. This volume expands the commitment to make research which is undertaken within the Economics Division of the Bank of England widely available. Included here are chapters which illustrate the breadth of interests which the Bank seeks to cover. Some of the research is, as would be expected, directly related to the specification of the Bank's model, but other aspects are also well represented.

Recursive Macroeconomic Theory,

fourth edition Lars Ljungqvist 2018-09-11

The substantially revised fourth edition of a widely used text, offering both an introduction to recursive methods and advanced material, mixing tools and sample applications. Recursive methods provide powerful ways to pose and solve problems

in dynamic macroeconomics. Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material. Only practice in solving diverse problems fully conveys the advantages of the recursive approach, so the book provides many applications. This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods. One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies. These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies. The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models. Other chapters

have been extended and refined. For example, there is new material on heterogeneous beliefs in both complete and incomplete markets models; and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models. The book is suitable for first- and second-year graduate courses in macroeconomics. Most chapters conclude with exercises; many exercises and

examples use Matlab or Python computer programming languages.
