Internet and Smartphone Use-Related Addiction Health Problems Olatz Lopez-Fernandez 2021-08-31 This Special Issue presents some of the main emerging research on technological topics of health and education approaches to Internet use-related problems, before and during the beginning of coronavirus disease 2019 (COVID-19). The objective is to provide an overview to facilitate a comprehensive and practical approach to these new trends to promote research, interventions, education, and prevention. It contains 40 papers, four reviews and thirty-five empirical papers and an editorial introducing everything in a rapid review format. Overall, the empirical ones are of a relational type, associating specific behavioral addictive problems with individual factors, and a few with contextual factors, generally in adult populations. Many have adapted scales to measure these problems, and a few cover experiments and mixed methods studies. The reviews tend to be about the concepts and measures of these problems, intervention options, and prevention. In summary, it seems that these are a global culture trend impacting health and educational domains. Internet use-related addiction problems have emerged in almost

all societies, and strategies to cope with them are under development to offer solutions to these contemporary challenges, especially during the pandemic situation that has highlighted the global health problems that we have, and how to holistically tackle them.

Managing Pain in the Older Adult Michaelene P. Jansen, PhD, RN-C, GNP-BC, NP-C 2008-03-20 Our elderly population is the fastest-growing segment of society, and pain, particularly chronic pain, is one of the most common problems this group faces. In *Managing Pain in the Older Adult*, Dr. Jansen provides treatment options designed for older adults. Controlling pain can be challenging as the elderly, in addition to the common physiologic changes of aging, often have multiple health problems and take many medications. Furthermore, drugs are only rarely tested on older adults, so pharmaceutical intervention often relies on a slow trial and error regime. Drawing on her experience in critical care and neuroscience nursing as well as work as a GNP, Dr. Jansen adopts a multimodality approach to focus on the assessment, diagnosis, and treatment of acute and chronic pain among older adults with interventional, non-interventional, pharmacotherapeutic, and nonpharmacotherapeutic methods. *Managing Pain in the Older Adult* addresses a myriad of factors pertaining exclusively to pain management among the elderly, including: The importance of early recognition of pain symptoms Environmental factors that influence pain and its perception Specific issues involved when treating the elderly Non-pharmaceutical treatments: physical therapy, acupuncture, and other complementary techniques Lack of resources for treating pain in

the aged The book will serve as an invaluable reference for a wide range of health care providers working with our aging population.
